

Netflix Content Analytics

Transforming raw streaming data into actionable business insights through end-to-end analytics

Project Overview

01

DataCollection

Netflix content dataset with 8,000+ entries across multiple attributes

02

DataCleaning

Python-based EDA, missing value handling, and feature engineering

03

SQL Analysis

Business-oriented queries for content trends and patterns

04

Visualization

Interactive Power BI dashboard with KPIs and insights

Dataset Summary

Key Features

- Type (Movie/TV Show)
- Title and description
- Country and director
- Release year and date added
- Rating and duration
- Genre (listed_in)

Data Quality Steps

Handled missing values in director, country, rating, and duration columns.

Standardized country names and created analytical features.

Content Distribution

8K+

Total Shows

Combined movies and TV shows
analyzed

70%

Movies

Majority of Netflix content

30%

TV Shows

Remaining content share

Top Content Producers

United States

Leading producer with highest content volume

India

Strong second position in movie production

United Kingdom

Third in overall content creation

Genre Analysis

Dramas

Most popular genre category

Comedies

Second highest content volume

International

Third in genre distribution

Release Year Trends

1

2010s

Steady growth in content production

2

2020

Peak year with highest releases

3

2021-2024

Continued strong content output

Duration Analysis

Movies

Average duration: **99 minutes**

Longest: 312 minutes

Shortest: 3 minutes

TVShows

Mostshows: **1-2 seasons**

Longest: 17 seasons

Business Insights

Content Strategy

Invest in top-performing genres: dramas, comedies, and international content

Regional Expansion

Expand content from India, UK, and other top-producing countries

Audience Targeting

Focus on TV-MA and R-rated content for mature audiences

End-to-End Analytics Workflow

Python

Datacleaning and EDA

MySQL

SQLanalysis and queries

Power BI

Interactive dashboard

This project demonstrates a complete corporate analytics workflow—from raw data to actionable business insights through cleaning, analysis, visualization, and reporting.
