

Netflix Content Analytics Dashboard

Business Intelligence & Viewer Insights using Python, MySQL & Power BI

Prepared By	Meet Vishal Modi
College	BMIIT, UKA Tarsadia University
Project Type	End-to-End Data Analytics Project
Tools Used	Python, Pandas, MySQL, Power BI, Gamma

1. Project Overview

This project analyzes Netflix content data to uncover trends in movies, TV shows, genres, ratings, release years, and country-wise distribution. The objective is to transform raw streaming platform data into actionable business insights using Python, MySQL, and Power BI.

2. Dataset Summary

Include dataset size, number of columns, key features, and important attributes such as type, title, country, rating, release year, genre, duration, and date added.

3. Exploratory Data Analysis using Python

Explain data loading, initial exploration, missing value handling, duplicate removal, country standardization, date conversion, and feature engineering.

4. Data Cleaning & Preprocessing

Mention the steps performed to improve data quality, including handling null values, standardizing columns, cleaning country values, and creating analytical columns.

5. Data Analysis using MySQL

Add business-oriented SQL queries and insights related to content type, genres, ratings, countries, directors, release trends, and duration analysis.

6. Dashboard in Power BI

Explain dashboard visuals such as KPI cards, slicers, genre analysis, country analysis, release trends, and audience rating insights.

7. Business Insights

Summarize key insights from the analysis, including content trends, dominant genres, top-producing countries, and audience segmentation.

8. Business Recommendations

Provide recommendations such as investing in top-performing genres, expanding regional content, improving audience targeting, and optimizing content strategy.

9. Conclusion

Conclude the report by explaining how the project demonstrates an end-to-end corporate analytics workflow using Python, MySQL, and Power BI.

Note: Add dashboard screenshots, SQL query screenshots, charts, and visual insights in the final version of the report.
